DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claim 10 is rejected under 35 U.S.C. 102(e) as being anticipated by US 7150710 to Harber et al.

In Reference To Claim 10

Harber teaches that acupuncture is an ancient health system based on twelve meridians on each side of the body. Each meridian has about 25 to about 150 acupuncture points. Using electromagnetic radiation into the meridians can stimulate the acupuncture points and has the advantage of being non-invasive (col. 2, lines 8-20).

Application/Control Number: 10/521,357 Page 3

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
- 4. A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 5720046 to Lopez et al. in view of US Pub No: 2002/0169357 to Chen.

In Reference To Claims 1-9

Lopez teaches that the body's meridian lines (ML) are the targets for being magnetically exposed or impacted by a magnetic structure (col. 5, lines 57-65). This is achieved by attaching the magnets to the body via articles of clothing such as a glove (100). The discrete permanent magnets each have a magnetic field strength of at least 800 gauss and are directed at strategic and symmetric points that relate to the human body according to shiatsu practice. The exposure is believed to therapeutically impact the human body parts along the meridian line (ML (1-10)) (col. 6, lines 27-60).

Chen teaches that acupoints are associated with meridian channels (¶ [0002]) and that the use of magnets on meridian channels is used to relieve pain (¶ [0005]). The magnet can be implanted or placed directly on the acupoints (¶ [0009]) and is preferred to be of a strength of 1000-3000 gauss with a variety of shapes and sizes (0.1 X 0.1 cm) (¶ [0044]). Although Chen discloses certain dimensions of magnet size it would have been obvious to one of ordinary skill in the art at the time the invention was made to have

Art Unit: 3735

provided a design choice of smaller magnet sizes for better utility in Chen's example of using the magnet for implantation into the ear of a person.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to have strategic placement of magnets on meridian lines similar to that of Lopez with the direct implantation and magnetic strength of Chen to have a magnetic therapy system that uses meridian lines to apply relief either by placing magnets on the surface or beneath the skin.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US Pat No: 5448777 to Lew teach a therapeutic glove that used meridian placed magnets.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Aaron B. Colquitt whose telephone number is (571) 270-1991. The examiner can normally be reached on Monday-Friday 7:30 - 5:00 EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Charles Marmor II can be reached on (571) 272-4730. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

8. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
